

Decarbonizing
at scale

We're done with dirty.

Heavy industry is a massive polluter, responsible for 40% of the world's CO₂ emission.

The steel industry alone accounts for more than 7% of the world's CO₂ emissions.

Transforming the most polluting industries is key to meeting the Paris Agreement goal of keeping global warming well below 2°C, preferably 1.5°C.

We've gathered a world class team to change heavy industry for good

300+ Employees

30+ Nationalities

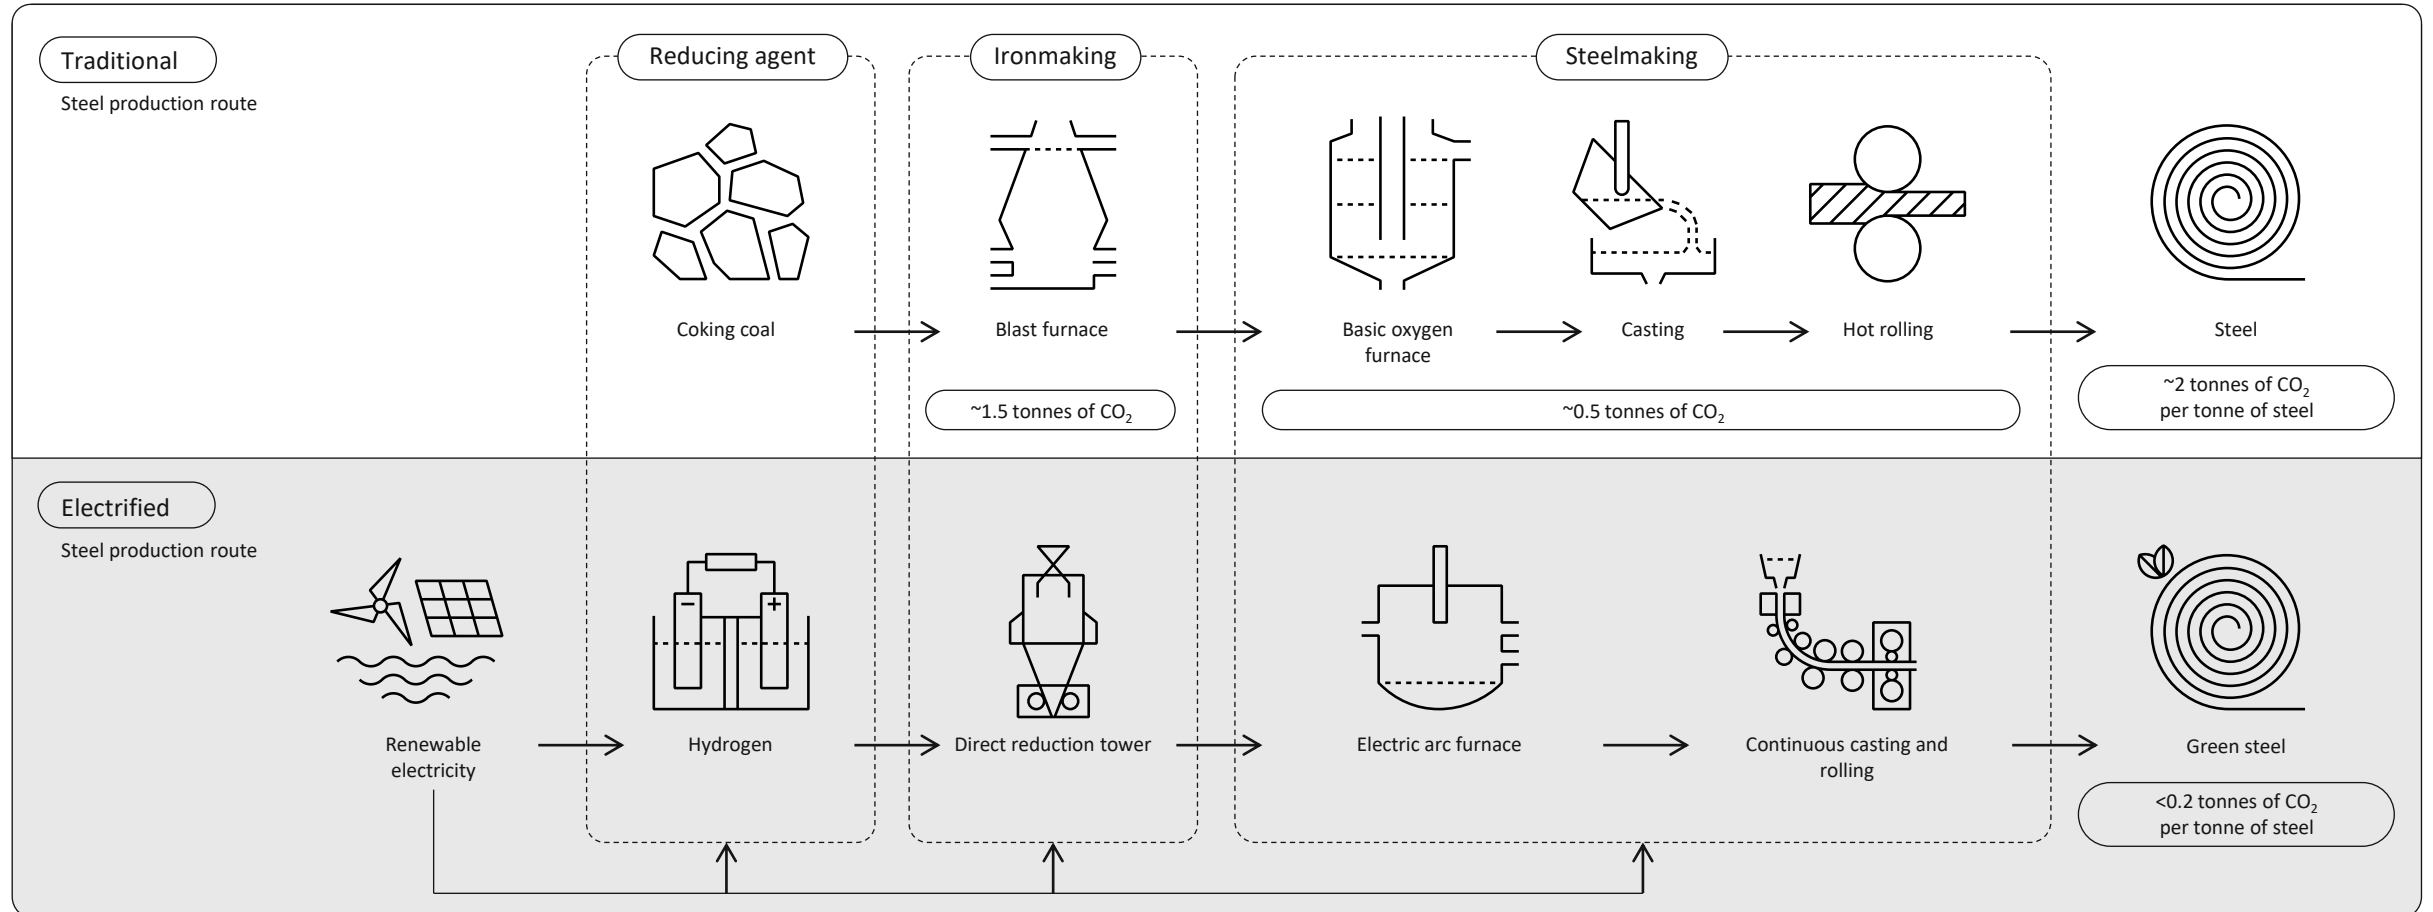

40% women among staff

50/50 gender split in management

Producing steel with up to 95% lower CO₂ footprint

Boden: our flagship

The home of Europe's largest green hydrogen plant and the world's first plant for large scale production of green iron and green steel

We depend on our customers to make the shift
- and 50% of our initial volumes are already sold

Stegra's logistics system

- 1 On-site logistics**
- 2 Logistics Northern Sweden**
Rail/truck between site and port, as well as nearby suppliers and customers
- 3 Maritime logistics**
Inbound/outbound shipping
- 4 Long-distance rail and truck**
Deliveries to Swedish customers and potentially European ones
- 5 In-land logistics Europe**
Delivery from European ports to end customers, including return scrap and source scrap
