## Comments regarding "Energjø Østersøen-cable corridors to Själland"

Accessibility in sea traffic routes in the Baltic Sea is of great importance to Sweden. In the area being investigated, there are routes of national interest for sea traffic between Sweden and Germany. Surveys for cable corridors should be able to carry out without significant damage to the national interest. However, already at this stage, the Swedish Transport Administration wants to stress the possibility of placing submarine cables under the seabed in order to minimize the impact on the accessibility for sea traffic.
